

Diagram of Steel Masts

SECTIONAL VIEW OF  
CONCRETE BLOCK

Amplification of Attachment D:

1. Masts similar to those shown here were mounted on many of the concrete blocks. [redacted] welded outside plant 202 and then mounted. Only last-minute work or repairs were done in the building. [redacted] masts were approximately three meters high, and that the baseplate covered the concrete blocks.
2. [redacted] further construction was going on at the end of the plant 202 farthest from the tank room. [redacted] almost as high as the top of the masts, [redacted] something like a large car radiator, with vertical fins rather than "cell-type" construction.
